**Course Description**  
This course will introduce students to urban geography – a part of geography concerned with processes of urbanization and their urban systems dynamics.

**Course Overview**  
Today, most people on Earth live in cities or, in other words, humanity is predominantly urban. From the first urban settlements to contemporary global urban centers some of which reaching dozens of millions of residents, cities have always provided people with distinct and often contradictory experiences. Cities are sites where economic activities and economic inequality are concentrated to the largest degree; they are centers of great intermixing of people, infrastructure, urban culture, and lifestyles; and yet urban spaces are segregated by class, ethnicity, race, and sexuality. After becoming familiar with the historical development of urban systems and cities with a main (but not a sole) focus on Western cities, we will examine different aspects of urban economic and social geographies in order to gain insights into workings of modern cities. We will end the semester examining cities are our best hope for worldwide climate justice.

Ultimately, the course is not just about learning facts about cities but also (perhaps more) about understanding and critically examining the processes that shape and change the world. Having a broad and integrative approach to understanding cultural, economic, political and environmental phenomena will in turn allow for students to develop the critical thinking and reflective skepticism that can lead to environmental and social sustainability.
Course Objectives / Student Learning Outcomes (SLOs)

The course is designed to introduce learners to the regions of our shared planet from a geographical perspective. At the end of the course, learners will be able to

1. Acquire basic knowledge of historical and contemporary urban dynamics as well study the spatial dimensions of systemic racism and other types of oppression such as those based on gender or religious identity.
2. Students will be able to use scientific evidence and geographic theories to explain spatial patterns of injustice and use geographic knowledge and skills to advance just and sustainable societies.
3. Describe fundamental concepts related to urban geography and its relationship with other aspects of human experience.
4. Develop skills for critical thinking about urban processes that are important for understanding the complexity of today’s cities.
5. Analyze and discuss key issues in the contemporary city in its varied configurations and socio-economic patterns around the world.

Required Texts and Materials

2. Additional required readings such as journal/newspaper articles will be posted on Blackboard. On occasion the lectures may be supplemented with video or web links.
