GTECH 201
Introduction to Geographic Information Science

Spring 2024
Tuesdays and Fridays, 10:00 AM – 12:45 PM

Place of Instruction:  Face-to-face in the Hunter Geography labs only
Credits/hours:  4/6
Instructors:  Jochen Albrecht, Geoffrey Fouad and Rosy George
Office Hours:  In-person Tu 2:00 PM – 3:00 PM; you are encouraged to contact me anytime
Offices:  HN 1030 (Albrecht) and HN 1044 (Fouad)
Pre-requisite:  GEOG 101 or 150; MATH 101

Course Description
The general theme of this course could be entitled Geography: the relationship game. Geography is very much about relationships and in this course, we will establish a scientific framework for reasoning about relationships such as spatial coincidence, distance, vicinity, scale, geometry and attributes, geographic features and their representation on a map, etc. Hand-in-hand with each of the relationships, you will learn how to apply your knowledge using geographic information system tools.

Goal: Familiarize students with a set of spatial concepts and tools to implement them.
Objectives: Abstraction of everyday geographic observations to put them to use in a spatial decision-making context.
Outcomes: By the end of this course, you should have a good understanding of different types of geographic data and how they can be analyzed using geographic information systems. GTECH 201 forms the basis for a row of other GTECH courses that cover the range from cartography to advanced GIS applications. GTECH 201 is a required course because the skill set you acquire here will serve you well in all jobs related to geography and environmental studies.

Textbook
None – all reading materials will be posted on BlackBoard.

Criteria for evaluation
I do not grade on a curve. If many students get good grades, great! If many have mediocre grades, so be it; it will be disappointing and an incentive to do better. I will not try to trick you with impossible exams. Ideally, all can have 100 points! Final evaluation will be based on the following breakdown:

<table>
<thead>
<tr>
<th>Component</th>
<th>Percentage</th>
</tr>
</thead>
<tbody>
<tr>
<td>Lab exercises (22)</td>
<td>44%</td>
</tr>
<tr>
<td>Individual studio project</td>
<td>25%</td>
</tr>
<tr>
<td>Participation in class</td>
<td>5%</td>
</tr>
<tr>
<td>Quizzes</td>
<td>6%</td>
</tr>
<tr>
<td>Midterm exam in two parts</td>
<td>10% (5% for practical midterm, 5% for theoretical midterm)</td>
</tr>
<tr>
<td>Final exam</td>
<td>10%</td>
</tr>
</tbody>
</table>
Policy on Incomplete (IN) and Credit/No-Credit (CR/NC) grades
A final grade of IN (incomplete) will not be given except under the most extraordinary, and documented, circumstances. CR/NC is not available to students enrolled in GTECH 201.

Course Policies
Announcements and grades will all be posted on BlackBoard.
The mode of instruction for this course is fully in-person.
Most of your work on the cartographic studio (your individual GIS project) will be outside of regular meeting times, although you are encouraged to contact either Jochen, Geoff, or Rosy for 1:1 (potentially online) meetings whenever you run into a problem.
The provisional schedule at the end of this syllabus is tentative and subject to change (which will always be announced on our GTECH 201 BlackBoard homepage). All official communication will be either via email or through BlackBoard. You are required to check the BlackBoard course site on a daily basis. All changes to the syllabus will be announced on the course home page. All lecture, lab, and reading materials are accessible through BlackBoard, and this is also the place where you upload your assignments. Your exams and assignments will be graded based on what you have uploaded to BlackBoard and this is where you will find your grades and may access course statistics that help you to assess your standing at any given time.

Communication
All email messages about this course should include GTECH 201 in the subject line and be signed with your full name.

Software (/Hardware) Requirements
We will be using software that runs as a so-called web service inside a browser, as well as desktop GIS software that at least for half of our lab exercises requires the Windows operating system. All the GIS software is either free and open source (QGIS) or can be downloaded for free using links that all properly enrolled students will be able to access (ArcGIS Pro).

Participation
Attendance is crucial. Assuming that the class-learning environment is active learning, adherence to protocols and the course timetable is very important. Lateness in arriving at class will not be tolerated. Class participation includes timely attendance and participation in organized class discussions, accomplishments of in-class tasks, and preparation of the reading assignments.

Hunter College Policy on Academic Integrity
Hunter College regards acts of academic dishonesty (e.g., plagiarism, cheating on examinations, obtaining unfair advantage, and falsification of records and official documents) as serious offenses against the values of intellectual honesty. The College is committed to enforcing the CUNY Policy on Academic Integrity and will pursue cases of academic dishonesty according to the Hunter College Academic Integrity Procedures.
**ADA Policy**
In compliance with the American Disability Act of 1990 (ADA) and with Section 504 of the Rehabilitation Act of 1973, Hunter College is committed to ensuring educational parity and accommodations for all students with documented disabilities and/or medical conditions. It is recommended that all students with documented disabilities (Emotional, Medical, Physical, and/or Learning) consult the Office of AccessABILITY, located in Room E1214B, to secure necessary academic accommodations. For further information and assistance, please call: (212) 772-4857 or (212) 650-3230.

**Hunter College Policy on Sexual Misconduct**
In compliance with the CUNY Policy on Sexual Misconduct, Hunter College affirms the prohibition of any sexual misconduct, which includes sexual violence, sexual harassment, gender-based harassment, and retaliation against students, employees, or visitors, as well as certain intimate relationships. Students who have experienced any form of sexual violence on or off campus (including CUNY-sponsored trips and events) are entitled to the rights outlined in the Bill of Rights for Hunter College.

- **a. Sexual Violence:** Students are strongly encouraged to immediately report the incident by calling 911, contacting NYPD Special Victims Division Hotline (646-610-7272) or their local police precinct, or contacting the College’s Public Safety Office (212-772-4444)
- **b. All Other Forms of Sexual Misconduct:** Students are also encouraged to contact the College’s Title IX Campus Coordinator, Dean John Rose (jtrose@hunter.cuny.edu or 212-650-3262) or Colleen Barry (colleen.barry@hunter.cuny.edu or 212-772-4534) and seek complimentary services through the Counseling and Wellness Services Office, Hunter East 1123.

**CUNY Policy on Sexual Misconduct**
I affirm all forms of gender expressions and identities. If you prefer to be called a different name than what is on the class roster, please let me know. Feel free to inform me about your preferred gender pronoun or if you do not have a pronoun.

**Preferred Gender Pronouns**
The policy is available at [http://www.cuny.edu/about/administration/offices/la/Policy-on-Sexual-Misconduct-12-1-14-with-links.pdf](http://www.cuny.edu/about/administration/offices/la/Policy-on-Sexual-Misconduct-12-1-14-with-links.pdf)

**Tentative Schedule**
Except for changes that substantially affect implementation of the evaluation (grading) statement, this syllabus is a guide for the course and is subject to change with advance notice. All changes will/would be announced on [BlackBoard](https://blackboard.hunter.cuny.edu), which you are expected to check on a daily basis. This syllabus is subject to updates. Changes will be announced in class and on Blackboard.

### Instructor expectations

Hunter College...

This is a place where students come to learn. It's a place where knowledge is developed and hopefully it's a place where students can see and participate in its development. Unlike previous schooling you don't have to be here, so we'll assume that you want to be here and that you are here to actively seek knowledge and skills.

With assumptions that you are (a) here of your own free will and (b) are actively seeking to gain knowledge and skills, there is only one fuzzy area (for some) - how to succeed! It's really quite simple: have fun. If you are enjoying what you are doing, you will succeed; if you are taking subjects or studying in a particular program and not enjoying it, you are unlikely to be successful.

A few words on success and enjoyment. Success is not just measured by your grade (but passing does help!), it is also measured by how you feel about what you are doing. You are the only person who can really judge whether you are successful - have you met your own expectations? Enjoyment does not necessarily mean stress free living (although maybe it is for some!). Taking only subjects
that you were told were "easy" doesn't guarantee enjoyment; some of us require a challenge in life! Again, only you are in a position to determine what you find enjoyable. A final thought on what a university is: this is also a place where faculty comes to learn...

**GTECH 201 Introduction to Geographic Information Science**

**Students:** to be successful you should be taking this subject because you want to take it, not because someone told you that you need to take it and you must be actively seeking knowledge and skills. This subject is a good participation "sport", but it's not a really good spectator event. You need to be proactive, be able to try something new, look at things from a new (spatial) perspective, ask questions. You need to know when to take a break, get some fresh air, rest your eyes (a Buddhist philosophy is quite useful...). Attend all sessions. When your absence is unavoidable, make sure you catch up on what was missed (the session recordings help). Plan your week as best as possible and make the commitment to spend the amount of time needed for you to be successful. Get a study partner or three, if this works for you. Remember, even if you are able to survive by cramming for exams, the subject matter will only go into short term memory. Eventually, you will reach a level where you can no longer survive by cramming, and your study habits will not benefit you.

**Faculty:** to be successful, I need to know that I've "made a difference" to at least some of my students, i.e., they feel successful. I'll provide a coherent subject structure, I'll deliver the best lecture possible on the day, and pointers to resources where possible and I will provide sound practical instruction and practice my listening skills so that I can understand what difficulties you may be having, so that we can resolve them. Furthermore, I am available and approachable; ask questions during class and at other times; use my almost continuous online presence to see me. Faculty have shown disappointing prowess at extra-sensory perception, please help me out!

We often lecture in subjects we are considered to have some expertise in; we are therefore fairly interested in the subject matter. We too are students in that we are continuing to learn new things in our areas of expertise and sometimes we are the ones who develop new knowledge in our areas of expertise!

**Theory vs. practice:** in lectures I try to provide an overview of the most important knowledge, but this never replaces the practical work on your cartographic studio. Sometimes lectures and labs will cover the same ground, but often, the best that can be done in some twenty-eight sessions is to provide just a "flavor" of the subject matter, something to whet your appetite, something to set the context for your own GIS work.

I wish us a lot of fun in this course,
