GTECH 36100 - GIS Analysis

Fall 2017 Wednesday 5:35 – 9:25 PM HN 1090B-2

Instructor: Shipeng Sun Office: HN 1043

Office hours: Monday 4-5pm, Tuesday 11-12pm, Wednesday 3-5pm

Phone and email: TBD

Course Description and Objectives

Building upon the basic GIS contents and techniques covered in GTECH 20100, this GIS Analysis course extends the basics to spatial database, 3D analysis, network analysis, field and surface analysis, spatial pattern and clustering analysis, 3S integration, and other advanced topics in Geoinformatics. A focus of this course is the development of spatial analysis models and geoprocessing workflows. While most techniques have a geographic origin, we will address all geo-spatially relevant methods from various disciplines in natural resources, environmental studies, and social sciences, to name a few. On the practical side, we will learn a few different software packages. Each of you will conduct an individual software project that is related to GIS analysis. You need to choose software packages, specify a project topic, collect the necessary data, and write a project report. More detailed instructions on the project will be provided.

Learning Outcomes

At the end of the semester, you should be able to

- design spatial database and perform spatial selection and filtering;
- describe spatial relationships in GIS analysis with quantitative methods;
- understand the basics of spatial statistics;
- produce and edit simple scripts to automate GIS tasks; and
- develop basic spatial decision support systems either stand-alone or as part of a larger application

Textbooks

Required: none. **Recommended**:

- Allen, David W (2009). GIS Tutorial 2: Spatial Analysis Workbook (for ArcGIS 10.1). Redlands, CA: ESRI Press. ISBN-13: 978-1589483378
- Rowlings B 2015. Spatial Cheatsheet
- de Smith M, Goodchild, M and P Longley 2016. Geospatial Analysis. Leicester: Winchelsea Press. Free access at http://www.spatialanalysisonline.com/ or as Amazon Kindle ebook (no ISBN)
- O'Sullivan, D. and Unwin, D.J. 2010. Geographic Information Analysis. Hoboken, NJ: Wiley. ISBN 978-0470288573
- Longley, PA, Goodchild, M. Maguire, D. and D. Rhind 2015. Geographic Information Science and Systems. 4th edition, Hoboken, NJ: Wiley. ISBN 978-1118676950.
- Worboys, M. and M. Duckham 2004. GIS: A Computing Perspective. CRC Press. ISBN 978-0415283755

Pre-requisite

GTECH 20100: Introduction to GIS

Criteria for Evaluation

Evaluation of academic performance is based on the following components and breakdowns.

ה
,)
,)
)

Numeric scores will be used throughout the semester. The course letter grade will be determined only at the end of the semester, although guidance as to letter grade standing will be given along the way.

Assignments are due six days after they are given in class. It is in your best interests to keep up with the work and meet deadlines for assignments. Incomplete grades and time extensions are not an option for this course. There are no "extra-credit" assignments. Unless otherwise instructed, you will submit assignments in electronic forms.

All labs exercises are designed for a 4-hour period. You are free to work with them at your own leisure, either in our computer labs, in your home department, or at your private home. You can use our computer labs at any time outside of the posted instruction times for other courses. It is your responsibility to manage your time to conduct both the labs as well as project work during the hours that the lab room is accessible. Of course, you are free to work at home as much you want – if you can arrange for access to the software that you need.

Each of you will conduct an individual semester-long software project that involves the GIS analysis of a substantial geographical problem. There are no requirements with respect to what software you use. In a similar vein, the application area (field) is to be chosen by you, who are also responsible for gathering the necessary data. Basically, you can choose whatever topic you want, provided it has to do with geographical analysis; the stress is on both words! It is your responsibility to find a suitable project, which will have to be accepted by the instructor. A few ready-made projects are available but experience shows that motivation increases when students take pride in their own project.

Incomplete (IN) and Credit/No-Credit (CR/NC) grades

The instructor cannot accommodate students who are late in their work or do not show up for the final exam. And, unless you produce a medical certificate or letter from the Office of AccessABILITY, the instructor will not give the final grade of IN (incomplete). To qualify for the grade of CR/NC you must meet all of the course requirements (see the section above entitled Criteria for Evaluation which includes making a final project presentation) and satisfy the terms and conditions of CR/NC. The CR/NC form must be submitted to your instructor no later than 15 minutes prior to the start of the project presentation period on December 20th.

Policies

Attendance

Attendance is crucial. Given that the class-learning environment is active learning, meaning that most of your performance is practical assignments rather than tests, adherence to protocols and the course timetable is very important. I will be on time. So you will also be on time. It's just common courtesy. Lateness in arriving at class, both lectures and laboratory/discussion sections, will not be tolerated. Active involvement in the course is evidenced in part by undertaking the mechanics of the practical assignments systematically, and learning the tools by hours of practice. In so doing, the tools soon come to be seen as a means to an end, rather than the end themselves. For example, you will make many maps, and may get caught up in this creative activity, but remember that the maps are being made for particular scientific purposes. Class participation includes timely attendance at laboratory sessions, participation in organized class discussions, accomplishment of in-class tasks, accomplishment of the preliminary assignment on time, and participation in the map poster display (if this is a part of the course this semester). Remember that a good part of your grade depends on class participation. Of course, you are expected to behave respectfully towards the instructor and the other students, by not imposing a dominating or threatening presence in conversations and discussions, and by allowing others to speak and be heard, especially if they are shy and their voice weaker than yours.

Electronics in the classroom

Electronic recording devices are allowed during lectures. All other personal electronics should be turned off before coming into the classroom. This includes cell and smart phones.

Computers may be used for taking notes and doing the lab exercises, and if you use them for activities not related to classroom content (email, Facebook chats, surfing the Internet for fun ...), you will be asked gently, but firmly, to turn them off.

Course Website

Web-enhancement in the context of this course means that everything pertaining to this course will be communicated through BlackBoard. You are required to check the BlackBoard course site on a daily basis. All changes to the syllabus will be announced on the course homepage. All lecture and lab materials are accessible through BlackBoard, and this is also the place where you upload your assignments. Your exams and lab assignments will be graded based on what you have uploaded to BlackBoard and this is where you will find your grades and may access course statistics that help you to assess your standing at any given time.

Communication

All email messages about this course should include GTECH 36100 in the subject line, and be signed with your full name as it appears in CUNYfirst. <u>Professionalism</u> and "<u>netiquette</u>" are expected in the communication through emails. If your emails are not replied to in a timely fashion, please consider rewriting your emails in a better way.

General Lab Policies

Lab policies are described in detail in http://www.geo.hunter.cuny.edu/techsupport/rules.html.

Hunter College Policy on Academic Integrity

Hunter College regards acts of academic dishonesty (e.g., plagiarism, cheating on examinations, obtaining unfair advantage, and falsification of records and official documents) as serious offenses

against the values of intellectual honesty. The College is committed to enforcing the CUNY Policy on Academic Integrity and will pursue cases of academic dishonesty according to the Hunter College Academic Integrity Procedures.

ADA Policy

In compliance with the American Disability Act of 1990 (ADA) and with Section 504 of the Rehabilitation Act of 1973, Hunter College is committed to ensuring educational parity and accommodations for all students with documented disabilities and/or medical conditions. It is recommended that all students with documented disabilities (Emotional, Medical, Physical, and/or Learning) consult the Office of AccessABILITY, located in Room E1214B, to secure necessary academic accommodations. For further information and assistance, please call: (212) 772-4857 or (212) 650-3230.

Hunter College Policy on Sexual Misconduct

In compliance with the CUNY Policy on Sexual Misconduct, Hunter College reaffirms the prohibition of any sexual misconduct, which includes sexual violence, sexual harassment, and gender-based harassment retaliation against students, employees, or visitors, as well as certain intimate relationships. Students who have experienced any form of sexual violence on or off campus (including CUNY-sponsored trips and events) are entitled to the rights outlined in the Bill of Rights for Hunter College.

- a. Sexual Violence: Students are strongly encouraged to immediately report the incident by calling 911, contacting NYPD Special Victims Division Hotline (646-610-7272) or their local police precinct, or contacting the College's Public Safety Office (212-772-4444).
- b. All Other Forms of Sexual Misconduct: Students are also encouraged to contact the College's Title IX Campus Coordinator, Dean John Rose (jtrose@hunter.cuny.edu or-212-650-3262) or Colleen Barry (colfeen.barry@hunter.cuny.edu or 212-772-4534) and seek complimentary services through the Counseling and Wellness Services Office, Hunter East 1123.

Syllabus Change Policy

Except for changes that substantially affect implementation of the evaluation (grading) statement, this syllabus is a guide for the course and is subject to change with advance notice. Changes will be announced in class and on Blackboard, which you are expected to check regularly during the semester.

Week	Date	Topic
1	08/30/17	Introduction
2	09/06/17	Spatial databases and spatial queries
3	09/13/17	Customizing GIS databases; sub-types, domains; regionalization
4	09/20/17	No class - University Holiday
5	09/27/17	Map Algebra and Spatial Analyst
6	10/04/17	Shapes, patterns, distance-based analysis
7	10/11/17	Location-allocation; topology revisited; network analysis
8	10/18/17	Spreading and diffusion
9	10/25/17	Spatial interpolation with 3-D Analyst and GRASS
10	11/01/17	Spatial interpolation with the Geostatistical Analyst
11	11/08/17	Exam
12	11/15/17	Advanced overlay analysis and geo-processing using web services
13	11/22/17	Fuzzy sets, fractals, and image analysis
14	11/29/17	Scenario building using scripting tools
15	12/06/17	Spatial decision support systems – last class meeting
16	12/13/17	Project Development – Finals week, no class meeting
17	12/20/17	Project Presentations 5:35 PM to 9:25 PM

Course Calendar

This class typically meets on Wednesday evening (except when it is a CUNY holiday).

10/04, Project proposal due 11/08, Exam

11/15, Project update report due 12/20, Project Presentation
